Snow weekend theme is 'A mid-winter's night dream'

Activities planned are: sled races, coronation in front of the student center, dance and folk concert in the center, ice skating, snow sculptures by organizations, cartoon movies, and possibly several other events. The committee urges students to bring warm winter wear and ice skates back with them after Christmas. Winter weekend is still one of the best dollar stretching deals available on campus. Keep in mind that each person has already paid fifty cents toward this event from their student activity fee. They're not leaving any more, but not that much.

Racism basis for play on campus

White racism? In America? Probably, but not that much anymore. A group from Washington, the Kemper Foundation, made a study of white prejudice in America. All the beginning of this period they were prepared to deliver a report that would step on any significant references to white racism. After a hard look at the ghetto, long lists of witnesses, and seeing the state of the negro black people in the general society the Kemper Commission made its report to Washington. The conditions they reported that made no mention of significant progress in black-white interrelationships. They said that our nation is in deep trouble; we are moving towards a black society and a white society, separate and unequal. The blame for this situation? "White institutions created it," the commission said, "while institutions maintain it, and white society condones it."

This circular graph represents a breakdown of the $25 student activity fee charged to full-time students each quarter according to percent. Activity budgets are partially determined by the amount of money each organization can raise on its own. Drama receives the bulk of its operating funds from ticket sales, hence a smaller cut of percent. Activity budgets are partially determined by the amount of money each organization can raise on its own. Drama receives the "the pie." On the other hand athletics must obtain a large portion of its budget from "the pie" because of meager gate receipts. Actual dollar amount each group gets from the $25 from each student can be figured by multiplying the percent times $25. (i.e. .05 x .25 = $1.25)

Last week's flurries quickened the pace of all caught outdoors to seek shelter. Outlook for a white Christmas is good.

The annual Christmas Concert of Concordia College, St. Paul, in this dedicatory year of the Herbert P. Boetow Memorial Music Center, will be presented on Sunday, December 10, 1972, at 4:00 p.m. and 7:30 p.m. in the Music Center auditorium.

The Man Nobody Saw

Somehow, not only for Christmas but all the long year through, the joy that you give to others is the joy that comes back to you. And the more you spend in blessing the poor and lonely and sad the more of your heart's possessing joy that comes back to you. And the more you spend in blessing people who are too often silent and often unaware of the social impact of their actions.

The Man Nobody Saw by Aaron Simmons

The annual Christmas Concert of Concordia College, St. Paul, in this dedicatory year of the Herbert P. Boetow Memorial Music Center, will be presented on Sunday, December 10, 1972, at 4:00 p.m. and 7:30 p.m. in the Music Center auditorium.

The audience will participate in traditional carol singing with Dr. Paul Maas serving as organist. A combined choir, under the direction of Prof. David Krause, will perform the Diekirch Lutheran cantata "Good Christian Men, With Joy Draw Near" and the "Te Deum" by W. A. Mozart. Prof. Leitinger will direct the combined choir in a performance of carols originating from various countries. Participants in the program will include the Concordia Band, Professor Leon Titus conducting, and the Siring Ensemble directed by Professor Friedrich Braun.

Students and friends of Concordia are invited to be guests of the college at a buffet supper which will be served in the dining hall from 5:00 p.m. to 6:45 p.m.

Hanukkah

Today marks the last day of Hanukkah, the Jewish festival of lights. It began last Thursday (4 days ago) when one candle was lit on the menorah, a religious celebration. Since then one more candle was lit each night until all eight are lit tonight.

Hanukkah is the celebration of the Jews for their victory over the Syria who controlled Jerusalem. The Syrians had defiled the Temple by sacrificing pigs on the altar and so the Temple was rededicated. The tradition says there was only enough oil in the lamps to burn one day, but miraculously they burned for eight. This is the reason for the burning of lights on the final day of the festival.
Sword's policy is to print all "letters to the editor" if possible. Students are requested to be concise to save space, for the letter must be fully signed by the writer.

The Sword encourages the students who wish to speak out on matters of concern to them to write "letters to the editor". All letters printed by students are to be of interest to fellow students. Without that interest there is no point in writing, and it is for requiring one. But for the student, who the student will have the complex of their life and death.

Letter to the editor

Students intent upon joining the ranks of the professional. The college must submit to a physical examination. This examination is a prerequisite for admission. The college admission has valid reasons for requiring one. But for the student, who the student will have the complex of their life and death.

The night out

It had been a rousing night at "The Parkway." The smoke was thick, the laughter loud, and the drinking quite heavy. It seemed the best city men and women could get closed for long. The restroom door continually creaked on its well-worn hinges and the stuttering call bell that I had been able to occasionally any close acquaintances trimming their glasses. For one and all alike it seemed the natural activity to while away an otherwise boring Friday night. In their eyes, the idle traffic remained could now ever temper them away from the delights of the night. I had reached what I was to my limit in consumption of the evening's pleasures and, rejecting my friend's offer to stay, wobbled past them toward the door to leave. One hard tug on the door and I was out into the hazy night air of Selby Avenue. A city bus seemed to sway away from me down the street. I grudgingly recalled where I was and where I intended to go. "Hmmm..." I thought aloud, "I think I've gotten perhaps the cold Faith to English and German. So up the hill I wandered—bubbling away to myself about "ganz gut Blau, schöne Madchen, ja, ja, u.w." into the darkness I wobbled past a shop with lights that glimmered and I was lost within. The light from the shimmering streetlamp failed to penetrate the black path ahead. It quickly became difficult to maintain my balance. When I fixed my gaze upon the sidewalk it seemed to come away from under me in a blurry terrifying form. No trouble, I simply that my eyes. I had scarcely traveled three paces in this manner when a deep voice bellowed next. "Volunteers for Christmas!" I had reached what I felt was my limit in consumption of the evening's pleasures and, rejecting my friend's offer to stay, wobbled past them toward the door to leave. One hard tug on the door and I was out into the hazy night air of Selby Avenue. A city bus seemed to sway away from me down the street. I grudgingly recalled where I was and where I intended to go. This pyramid mummifier is now working in Wollseger Hall. A sacrifice is placed on the altar plate and presto, instant mummy. Experimentation is continuing to determine its true value as a mummy maker. All results will hopefully be published in the SWORD.

When a Frenchman, M. Bovis, visited the Great Pyramid he noticed that some garbage cans in the King's Chamber contained dead cats and other small animals that had apparently wandered into the Pyramid and died. There was something odd about these corpses: there was no smell or decay to them. Curious as to the cause of this phenomenon, Bovis began experimenting with pyramid models, and found that the edges of the blade automatically recovered their sharpness after use, that he could share with one olive blue blade as many as 200 times. He concluded that the environment inside the pyramid somehow made the crystals in the blade return to their original form. Bovis was issued patent no. 9,184 by the Czechoslovak patent office and began manufacturing "Cheops Pyramid Razorblade Sharpeners" out of cardboard. Today they are being made of styrofoam.

A Checoslovakian radio engineer named Karek Drbal read Bovis's reports and made some further experiments with pyramid models, concluding that there is "a definite relation between the shape of the space inside the pyramid and the physical, chemical and biological processes going on inside that space."

The same phenomenon has been noted in Italy and Yugoslavia where milk pasteurized in pyramidal containers keeps fresh indefinitely without refrigeration. A French firm has also patented a pyramidal container for yogurt.

Drbal wondered if the shape might be responsible for an accumulation of electromagnetic waves or cosmic rays, or of some unknown energy. Placing a used razor blade within a six-inch-high cardboard model of Cheops' pyramid, oriented to true north, Drbal found that the edges of the blade automatically recovered after sharpening. He could share this blade with one olive blue blade as many as 200 times. He concluded that the environment inside the pyramid somehow made the crystals in the blade return to their original form. Drbal was issued patent no. 9,130 by the Czechoslovak patent office and began manufacturing "Cheops Pyramid Razorblade Sharpeners" out of cardboard. Today they are being made of styrofoam.

An engineer and former professor of radio, L. Turvune, maintains that all sorts of different phenomena—being conditions of different frequencies—act as different resonators for energy in the cosmos. This has led to speculation that the pyramid might be some sort of gigantic lens which is able to focus an unknown energy simply by means of its shape.

Even the coffer in the King's Chamber has been considered such a device by Wirth Smith, who points out that the cubic capacity of the coffers is exactly the same as that of the biblical Arc of the Covenant. According to Maurice Denis-Papin, descendant of the famous inventor of the Arc, the Arc of the Covenant was a sort of electric capacitor that is to say, two conductors separated by an insulator. On either side of the Arc were garlands which may have served as condensors. Denis-Papin says that the Arc was placed in a dry spot where the magnetic field was capable of producing an electrical charge of 500 to 700 volts. The Arc is said to have been made of acacia wood, lined inside and out with gold: this is to say, two conductors separated by an insulator. On either side were garlands which may have served as condensors.
